iPad Application: Overview, Features, and Device Requirements

Last Modified on 08/25/2022 10:01 am EDT

About

The iPad application allows you to document specific client care on an iPad depending on if you're online or offline. To learn more about the iPad application beyond the **NSS Help Center content**, purchase user licenses, or request iPad application setup, contact your Account Manager.

iPad Application Features

Below is a list of features that are available on the iPad application.

- Log in using NSS credentials
- View Locations available to the user
- Load patients and patient data for a selected Location *(online only)*
- Add new patients
- Transfer patients to a different Location
- Discharge patients *(online only)*
- Readmit patients *(online only)*
- Take pictures for Camera Upload Fields on the Face Sheet *(full functionality online only, limited functionality offline)*
- Create new Forms that have been set up to load in the application (only specific **Form fields** are supported on the iPad)

Device Requirements

The following list details the requirements associated with the iPad application.

- The iPad application is **only** supported on iPad devices
- The application is not supported on iPhones or any other iOS devices (iMacs, Mac minis, Mac Pros, or MacBook)
- No Android devices are supported by this application
- iPads must at least have iOS 12.0 for the operating system, which was released for iPads on 9/17/2018
