

# DSM-5-TR Upgrade

Last Modified on 02/14/2023 8:24 am EST

## Introducing the DSM-5-TR at Next Step Solutions

On Monday February 13, 2023, all NextStep Solutions environments will have their DSM-5 database upgraded to **DSM-5-TR**.

No downtime is expected. The DSM-5 diagnosis widget may run slowly for 2 minutes while the database is being updated.

The vast majority of codes and descriptions will remain the same. However, many codes will have updated descriptions; and many descriptions will have updated codes.

Current NSS DSM-5	New NSS DSM-5-TR
<b>F06.1</b> Unspecified catatonia	<b>F06.1</b> Unspecified catatonia (code first R29.818 other symptoms involving nervous and musculoskeletal systems)
<b>N/A</b> - Not in database	<b>Z03.89</b> No diagnosis or condition

## Overview of Changes

The upgrade to DSM-5-TR will consist of the following:

- New codes and descriptions added for the E, F, G, N, R, T, and Z code sets
- Codes and descriptions updated for the F code set
- No codes were removed

**Please note:** All existing client diagnoses are still billable, even if the code or description has changed.

More information on the changes related to the DSM-5-TR are provided by the American Psychiatric Association and can be found [at this link](#).

The functionality of the diagnosis widget itself will remain unchanged. This update is strictly to modernize our DSM-5 database.
