## 11.6.2 Beta Release Notes

Last Modified on 02/28/2024 11:46 am EST

### Release Timeline (Subject To Change):

- **BETA NSS CLINICAL 11.6.2 Released: Sunday 2/11/2024**
- **GENERAL NSS CLINICAL 11.6.3 Release Date: Sunday 2/18/2024**

### 11.6.2 Feature Enhancements:

Release 11.6.2	
<p><b>NEW Census Billing: Better user experience and faster load times</b></p>	<p>Census Billing has received a major overhaul.</p> <ul style="list-style-type: none"> <li>• <b>Performance</b> of the page has increased substantially, and users will notice data loads and saves within seconds.</li> <li>• <b>Visually</b> the page now looks more similar to other NSS pages that use grids for data editing.</li> <li>• Users can now <b>search</b> for data either on the entire page, or, in an individual column.</li> <li>• Users will see a <b>new "Errors" section</b>, which will explain to the user why certain services were unable to be processed.</li> </ul> <p>Functionality remains largely the same, but performing some operations have changed:</p> <ul style="list-style-type: none"> <li>• To apply a value to all displayed clients, users must now select their desired value in the "Apply To All" section and click Apply.</li> <li>• Changes are no longer autosaved. Users are encouraged to frequently click Save as they work in Census Billing.</li> </ul> 
<p><b>User Interface Changes on Med Plan Note</b></p>	<p>Those familiar with the Medication Plan page will see improvements to the user experience. The Date of Service field has been moved to the top, the various sections have been formatted into "cards" for visual distinguishing, and some spacings, colors and fonts have been updated.</p>

**Ability to configure the Incident Report page**

Admins with access to System Setup (Supplemental) can now configure the Incident Report page. The once-static page can now have fields enabled and disabled, fields can be made required, Help Text can be added or changed, and more configuration options.

**eMOR: Designate a med as Self-Administered and display in eMAR**

An eMOR feature has been implemented for agencies who use NSS eMAR. On the Medication Plan, users will now see an option called Self-Administer, which **saves automatically** upon checking or unchecking. Once a medication or pass has been designated as Self-Administered, users will then see "Self-Administer (eMOR)" as Yes when they go to pass in eMAR.

eMOR stands for electronic Medication Observation Record.

Medications:

Prescribed Medications

4 Total Meds					
Stat...	Medication	Instruction	Start Date	Prescribed by	Self-Administer (eMOR)
	phenobarbital	16.2 mg tablet xTake 1 tablet by mouth as directed oral - (42 / 0)	12/14/20...	NextStepDe Doctor, NSS	<input checked="" type="checkbox"/>
	Aldactone	25 mg tablet xTake 1 tablet by mouth once a day oral - (30 / 3)	12/13/20...		<input type="checkbox"/>

**Need to Pass:**

**Medications:**

				Medication	Self-Administered (eMOR)
<input type="checkbox"/>				Abilify	No
<input type="checkbox"/>			PRN	Keppra	No

**Display "Change Admit Date" Validation Error Instructions**

When changing a client's overall Admission Date from the Document Center, admin users will now see helpful text explaining the rules about why the selectable dates are limited. Note that the rules themselves have not changed.

Examples:

Message: "Enter a new admit date on or before <AdmissionDate> (current admission date)"

Message: "Enter a new admit date on or before the earliest Date of Service: <EarliestDoS>"

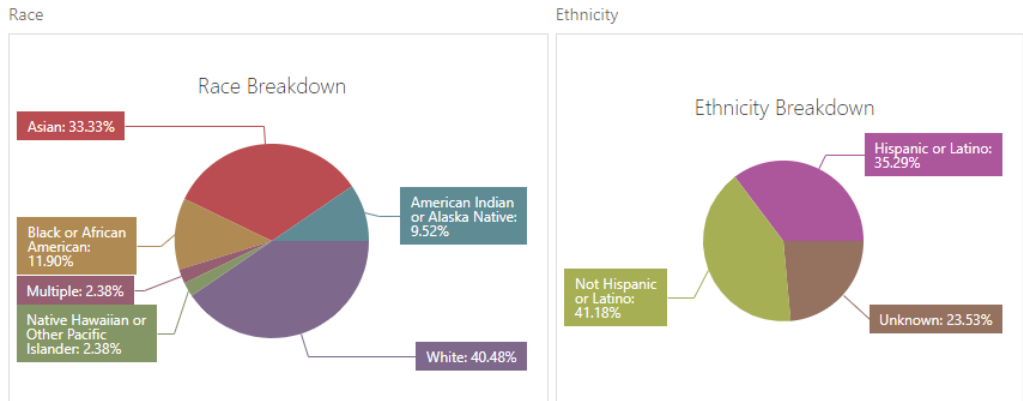

Message: "Enter a new admit date between <PreviousDischarge> (previous discharge date) and <TodaysDate> (today)"

Message: "Enter a new admit date between <PreviousDischarge> (previous discharge date) and <EarliestDoS> (earliest Date of Service)"

**Client Demographics Report**

Visualize your demographics data with this dashboard: See pie graphs of your clients' Demographic Breakdowns, see bar graphs for Age Breakdowns, or just view the simple grid of clients and their reported demographics.

Make sure to click Dashboard Parameters and set both a Start Date and End Date.

**Add demographics to report builder views**

Users trained on the report designer will now be able to select standardized demographics fields.

**Validating data users enter into form fields / Validation Strings**

A small enhancement was done for our validation string feature. Learn more about how to set up and use validation strings here:

- [Restrict What Users Can Enter Into Form Fields - Validation Strings](#)

**11.6.2 Bugs Fixed:**

# WHAT'S NEW

Release 11.6.2	
<b>Treatment Plan: Clicking "Add Problem" bug</b>	<p>Previously on the Treatment Plan Builder, if a user clicked Add Problem after selecting Goals (for a different Problem), those Goal selections would become un-selected.</p> <p>Going forward if a user clicks Add Problem after selecting Goals, those Goal selections will save.</p>
<b>Software and Database Performance Upgrades</b>	<p>Users will experience significantly faster load times due to performance upgrades on the System Setup (Supplemental) page.</p> <p>Users will also see some performance improvements on forms, Group Notes, and in Notes Search.</p>
<b>Diagnoses on Notes no longer produce an error</b>	<p>Using the diagnosis widget on a Note, then attempting to bill using that diagnosis on that same note, was causing some users to see an error. This has been resolved and users will be able to select a newly-added diagnosis as expected.</p>
<b>IBHRS Treatment Tool error on POM</b>	<p>IBHRS state reporting: Previously, if a client has a POM filled out they were not passing validation when Stage of Change 1 and Stage of Change 2 are the same response. This is no longer the case if Program Area Code 1 and Program Area Code 2 have different values.</p>
