NextStep Clinical 11.8 Release Notes

11.8.1 Release Notes

Release Date (all agencies): **5/19/2024**

Issues Resolved:

Release 11.8.1	
Beta Issue Resolution	Issues which originated in version 11.8.0 (beta) were quickly resolved.

11.8.0 Beta Release Notes

Expected Release date (lighthouse beta agencies): 5/12/2024

New Features:

Release 11.8.0	

Census Billing: Display Programs "active *at the time*" of Census Billing Date	This applies to agencies that use NextStep Billing and has programs in clinical linked to billing.
	
	On the **Census Billing** page, currently the Program dropdown displays, by default, all programs. However you can now set up NextStep to show only the programs the client was in during the selected Census Date.
	• In **System Setup (Supplemental) → Census Billing** use the toggle to select either:
	  ○ **Display all programs**, or
	  ○ **Only display the client's programs**.

Census Billing: Rearrange the sequence order in which Programs appear	In System Setup (Supplemental) → Billing Configuration, for the Program field, click + to set the order that you want the Programs to appear in the Census Billing dropdown.

Release 11.8.0	
New Religion options on Face Sheet	Users can now select None or Not Disclosed in the Religion dropdown on the Face Sheet. Having these values also makes it possible to make this field required since the client is able to "opt out."
Dose Orders Grid on the Medication Plan	For agencies with Dispensing enabled, you can now view the Dose Orders grid (from the Dispensing module) directly from the Medication Plan (in NSS clinical). This new Dispensing Dose Orders section will give providers more information to make informed decisions.
Dispensing Dose History Grid on the Medication Plan	For agencies with Dispensing enabled, users can click a new button on the Medication Plan called **Dose History** which will pop up a new window, with the familiar grid as seen in the dispensing module. Users will no longer have to navigate to Dispensing to see a client's dispensing Dose History.
Incident Reporting Setup selections update in Dispensing	For Dispensing agencies, you can update the module's incident report screen by making changes in **System Setup (Supplemental) -> Incident Report Configuration** section where you can: • Maintain the items in the Incident type dropdown • Maintain the items in the others Notified dropdown • Use the Enabled checkbox in Incident types to control if the types appear in the clinical incident report and • Use the Is Dispensing Incident? checkbox in Incident types to control if they appear in the clinical incident report and the dispensing incident report. Disabling an Incident Type disables in both clinical and dispensing

Issues Resolved:

Release 11.8.0	

Release 11.8.0	
Date of Service not matching between Clinical note and Billing Services	For some programs (IHH, billed once/month), the Data of Service on clinical notes was not matching the date of services in Billing Services. This issue has been fixed.
Error when opening Billing Services Dynamic	When some users attempt to open the Billing Services Dynamic Report they were receiving the following error: "Unhandled Exception... unable to cast object of type Dev Express.web". This issue has been fixed.
