

# NextStep Dispensing 1.7.0 Release Notes - Beta

Last Modified on 12/08/2024 3:33 am EST

Version 1.7.0 release date: 12/8/2024

## Feature Enhancements:

Release 1.7.0	
<p><b>Alert Templates can link to a Dose Order's expiration date</b></p>	<p><i>Dispensing &gt; Utilities &gt; Global Settings &gt; Alert Templates</i></p> <p>Users can define Alert Templates that can be linked to Dose Orders. Each item in the template can be set to key off either the dose order's start date or its expiration date.</p> 
<p><b>User ID and Location display on screens</b></p>	<p>The Dispensing screens now display a note in the lower right corner showing who is logged in and from what location</p> 

## Issues Resolved:

Release 1.7.0	
<p><b>Syncing Improvement</b></p>	<p>Syncing has improved to correct a past issue with dose order updates being overwritten.</p>
<p><b>Posting a dose order that had been pending updates appropriately</b></p>	<p>In the past, if a User created a dose order without posting it, when they returned to that pending dose order, made updates, and clicked <b>Post Order Now</b>, the settings for the screens were not updated properly and the dose order might come up later via <b>View Order/AWL</b> as editable instead of read-only. This issue has been resolved.</p>

**Improved interaction on Manage User permissions**

*Dispensing > Menu > Manage Users*

In the past, when a User was setting permissions for an account via the **Manage Users** feature, the interface forced unnecessary scrolling by jumping to the top as each permission was clicked to change it.

This issue has been resolved.
