

NextStep Clinical 11.14 Release Notes

Last Modified on 02/20/2025 9:31 pm EST

Note: Where paths or screenshots are provided with the descriptions, the naming conventions used are those from NextStep's standard configuration. If your agency has customized names and menu placements, what users see on their screens may differ.

11.14.0 Release Notes

Estimated Release Dates:

Beta: 2/23/25

General: 3/2/25

Feature Enhancements:

Release 11.14.0	
A new option allows either dropdowns or text fields for the Frequency and Responsible Staff fields in Treatment Plans	<p><i>Main Menu > Treatment Planning > PCP Wizard > Step 4</i></p> <p>Agencies will now have the option to use dropdowns to fill the Frequency and Responsible Provider fields in Step 4 of the PCP Wizard. Previously, those could only be text fields.</p>
A Forms version of the Draft Notes Not Finalized Dashboard is now available	<p><i>Main Menu > Reports > Administrative Reports > Draft Forms</i></p> <p>The Draft Forms dashboard lets you view all draft forms. You can use the dashboard to identify incomplete forms for discharged clients. You can also filter by Billing Friendly to identify draft forms that, once completed, will be sent to NextStep Billing.</p>
In Lab Results, the default setting will be to view the latest results	<p><i>Main Menu > Treatment Planning > Lab Results</i></p> <p>The Lab Results page now only shows the latest result for the selected order. Newer results contain values from all prior Partial results. If you need to see all past partial results, you can click on the All radio button and click the Search button.</p> 
When ordering Labs for a client with only one diagnosis, choose that one by default	<p><i>Main Menu > Client Selection Panel > Select a Client > Click "Orders"</i></p> <p>When entering Lab Orders for a client, if the client has only one diagnosis, show it by default.</p>

Issues Resolved:

Release 11.14.0

Resolved issue where users could not save the setting of the Hide Reference Prompt When Printing checkbox when setting up field references.

Main Menu > Admin Tools > Form Setup > Select a Form > Add New Field > Choose Type "Field Reference ONLY"

In the Form Builder there was an issue where, in some circumstances, the value of **Hide Reference Prompt When Printing** would not save.

USER DEFINED FORMS -

ADD A NEW FIELD TO THE FORM :

Field Name : (Field name for display purposes)

Internal Notes Only:

Alias Field Name: Alias

Type:

Location:

Disable Print:

Hide Reference Prompt When Printing: ←

Select	Form / Note	Field	Freeze when sealed	Type
<input type="checkbox"/>	Face Sheet	Previous / old MRN	Yes	Form

To address this issue, and make the user interface more consistent, we have made the following changes.

- The **Hide Reference Prompt When Printing** option was replaced with **Print Reference Prompt**.
- The new **Print Reference Prompt** can be turned ON when you want the prompt to show when printing.
- For existing forms where **Hide Reference Prompt When Printing** had been set ON, we set the new **Print Reference Prompt** option to OFF so that behavior would be consistent with how it was when the form was saved originally.

Internal Notes Only:

Alias Field Name: Alias

Print Reference Prompt: ←

Type:

Location:

Disable Print:

Reminders List performance issue related to unlinked reminders has been resolved

Main Menu > Reminders

In the past, when Problems have been classified as Referred, unlinked reminders could build up in a user's Reminders List causing difficulty getting the list to open. This has been resolved.
