7.17.2 Release Notes

Last Modified on 11/02/2026 1:59 pm EST

Release Date: Wednesday 11/4/2026

Feature Enhancements:

Release 7.17.2	
Base Line Items Zeroed During Bundle Processing	Base Line Items no longer require manual service rate overrides. When the Services Preprocessor reclassifies a line item as a Base Line Item during Activity Code Bundle processing, its Billed Amount and Balance are now automatically set to $0.00, ensuring A/R reflects only billable amounts.

Issues Resolved:

Release 7.17.2	
NDC Drug Quantities Now Keep Decimal Units on 837P Claims	When an activity code has an NDC and a decimal Units value, the drug quantity in the 837P Loop 2410 CTP segment now goes out with its exact decimal value instead of being rounded to a whole number. This makes sure payers receive accurate NDC quantities for these drugs.
